- Toyota
- Union Pacific Railroad
- United Airlines
- US Airways
- US Military
- Washington Metro Area Transit Authority
- Whirlpool Corporation

# CTRL UL101 Testimonials

**“We’ve had great success with this tool.”**

- Luis Camacho, United Airlines

**The UL101 “allows fast identification of the scope of problems to be corrected. Cuts trouble shooting labor by 50% to 75% compared to conventional methods”**

– Bill Hess, Johnson Controls, Inc.

**“The CTRL UL101 ultrasonic detection device is an extremely useful preventive maintenance tool in the early detection of irregular sound signatures, which will reveal a problem before failure of equipment occurs.**

**This will prevent costly down time and major damage to manufacturing equipment, such as motors, gearboxes, shafts, and conveyors, all of which contain bearings along with other moving parts.”**

- Peter Latrofa, Machine Development, Fellowes Manufacturing Company

**“The [CTRL UL101] leak detector is working great. We used it in a building that we knew had leaks but could not find. When we used the leak detector, we found five leaks inside of the drywall and repaired them. Now the air compressors are cycling as they should.”**

– Rodney Taylor, Jackson Memorial Hospital

**“We have been using the UL101 for more than 3 years now to find air and gas leaks for our customers. We are extremely happy with its capabilities to find even the smallest leaks.”**

– Air Audit Specialist, Brehob Corporation

**CTRL Systems, Inc.**
